

A BETTER VIEWPOINT

How Galileo Performance Explorer Aids Mergers and Acquisitions

The last few years have seen a record number of mergers and acquisitions across every industry.

Successful M&A deals require detailed analysis of storage, servers and IT assets. **Galileo Performance Explorer, a cloud-based IPM service, can help you gain a clear picture of these critical metrics.**

\$104.2 million

the value of the average M&A announced in 2016

\$3.8 trillion
global M&A volume in 2016

Here's How:

Review Each Business Entity's IT Environment

Galileo can monitor the IT infrastructure of each entity, providing you with a clear picture of each organization's technology, configuration and performance.

Virtual Consolidation of Tech Assets

Galileo's Tag Manager lets you virtually combine the assets of M&A entities to evaluate consolidated workloads. Visually intuitive dashboards provides critical merger information around capacity and performance.

Trend Identification & Superior Planning

Informative charts provide a clear picture of utilization of all infrastructure assets of each company. You'll discover areas where resources overlap or exceeds the other, letting you maximize performance while minimizing costs.

Move Assets & Monitor Progress

After migration, Galileo can help you monitor the newly combined resources to make sure expectations are being met or identify new requirements.

Galileo Performance Explorer is a vital service in your M&A transition, providing data on critical metrics for all entities involved. You can identify trends and issues before they become problems and create the ideal combined environment. [Learn more at galileosuite.com](http://galileosuite.com).
